

PROVA 1

1) Annullamento e revoca dell'atto amministrativo

2) Gli organi degli Enti Locali e le relative competenze

3) Descrivi una situazione di gestione del tempo e degli obiettivi lavorativi in cui ti sei trovato e come l'hai gestita.

A direct-access attack is when an unauthorized user (an attacker) gains physical access to a computer, most likely to directly copy data from it or to steal information. Attackers may also compromise security by making operating system modifications, installing software worms, keyloggers, covert listening devices or using wireless microphones.

NON ESTRATTA

PROVA 2

1) L'accesso agli atti nella L. 241/1990

2) I controlli interni dell'Ente Locale

3) Descrivi una situazione di lavoro di gruppo in cui ti sei trovato e come l'hai gestita.

A backdoor in a computer system, a cryptosystem, or an algorithm, is any secret method of bypassing normal authentication or security controls. These weaknesses may exist for many reasons, including original design or poor configuration. Due to the nature of backdoors, they are of greater concern to companies and databases as opposed to individuals.

ESTRATTA 

PROVA 3

1) Il responsabile del procedimento nella L. 241/1990

2) Le Unioni di Comuni

3) Descrivi una situazione di conflitto lavorativo in cui ti sei trovato e come l'hai gestita.

Normal internet users are most likely to be affected by untargeted cyber attacks. These are where attackers indiscriminately target as many devices, services or users as possible. They do this using techniques that take advantage of the openness of the Internet. These strategies mostly include phishing, ransomware, water holing and scanning.

ESTRATTA CF

PROVA 4

- 1) La motivazione del provvedimento amministrativo
- 2) I documenti di programmazione degli Enti Locali
- 3) Descrivi una situazione in cui hai dovuto aiutare un collega e come l'hai gestita.

A vulnerability is a security weakness in the design, implementation, operation, or internal control of a computer or system. Most of the vulnerabilities that have been discovered are documented in the Common Vulnerabilities and Exposures (CVE) database. An exploitable vulnerability is one for which at least one working attack or exploit exists. Vulnerabilities can be researched, reverse-engineered, hunted, or exploited using automated tools or customized scripts.
